

# Morphisec Mac Protector (MMP)

*Stop Ransomware and Data Exfiltration on macOS,  
Without Slowing Deployment*

From engineering teams to executives and finance users, macOS adoption is rapidly expanding across enterprise environments, making it a critical part of the modern attack surface. Yet securing macOS endpoints presents two persistent challenges: a prevention gap, where ransomware and data exfiltration attacks operate at machine speed and bypass detection-based tools, and a deployment gap, where rolling out security at scale through MDM platforms like Jamf and Microsoft Intune becomes a bottleneck.

Without addressing these risks, organizations face increased exposure to advanced threats, over-reliance on reactive security tools, and delayed or incomplete deployments, resulting in fragmented protection and elevated operational risk.

## Key Benefits

Morphisec Mac Protector (MMP) closes security gaps, delivering prevention-first endpoint security for macOS, paired with enterprise-ready deployment capabilities designed for real-world environments.

### Prevention-First Threat Protection

- + Stop ransomware and exfiltration-style attacks before they execute, eliminating reliance on detection after compromise.

### Anti-Ransomware Protection (MVP)

- + Prevent encryption attempts and block ransomware activity at the earliest stages of execution.

### Exfiltration Awareness

- + Identify and stop suspicious data movement behaviors, reducing the risk of data loss and breach.

## How It Works

Morphisec Mac Protector (MMP) is built with enterprise deployment realities in mind, ensuring that security doesn't stall at the pilot stage. Through a purpose-built Mac Distribution Kit, Morphisec enables scalable, streamlined rollout across macOS environments using familiar enterprise workflows.

The solution includes a standardized .pkg installer, MDM configuration profiles, and deployment scripts that support automation and integration with tools like Jamf and Microsoft Intune.

Designed for MDM-first environments, MMP enables consistent deployment across distributed teams while minimizing friction between initial testing and full-scale rollout. By simplifying packaging and deployment workflows, Morphisec accelerates time-to-value, reducing operational overhead for IT teams and ensuring macOS protection can be deployed quickly, efficiently, and at scale.

### Built for ARM. Designed for Simplicity.

macOS adoption is accelerating, but security often falls short at both prevention and deployment. Without a solution built for enterprise reality, organizations face increased exposure to ransomware and data exfiltration, along with stalled rollouts and operational friction. Morphisec closes the gap, delivering prevention-first protection for macOS alongside enterprise-ready deployment workflows, so you can secure every device quickly, consistently, and at scale.

## About Morphisec

Morphisec is the global leader in prevention first cybersecurity and anti-ransomware protection, delivering preemptive cyber defense that stops advanced attacks before execution. Founded in 2014 and headquartered in New York, Morphisec protects millions of endpoints across the finance, healthcare, manufacturing, and technology sectors, reducing dwell time, false positives, and incident response costs. With its Ransomware Free Guarantee and commitment to adaptive cyber resilience, Morphisec is redefining how enterprises stay protected in an AI accelerated world.
